SUMMARY

Target Role: AI-ML Intern

Motivated Physics undergraduate with strong foundations in mathematics, statistics, and programming. Hands-on experience in machine learning, quantitative modeling, and full-stack product development. Seeking internship opportunities in AI/ML, Data Science, and Quantitative Research with a focus on predictive systems and financial analytics.

EDUCATION

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat 2024 - Present
5 Year Integrated M.Sc. Physics **CGPA: 7.32**
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Python, Statistics

SKILLS

Languages: C/C++, Python, JavaScript, SQL, HTML/CSS
Frameworks & Libraries: NumPy, Pandas, Scikit-Learn, XGBoost, Matplotlib, FastAPI, Next.js, Node.js, Prisma
Tools & Databases: MongoDB, Git/GitHub, Socket.IO

PROJECTS

High-Frequency LOB Simulator & Market Making Engine | Python, Pandas, XGBoost Apr 2026

- Built an event-driven limit order book simulator modeling bid/ask dynamics and market depth in a realistic microstructure setting.
- Extracted predictive features like spread, order book imbalance, micro-price, and depth imbalance for short-term direction estimation.
- Trained an XGBoost classifier with chronological validation and evaluated strategy performance under adverse selection and inventory constraints.

Quantitative Exotic Options Pricing Engine | Python, FastAPI, Next.js, NumPy Jan 2026

- Developed a Monte Carlo pricer for European, Asian, and barrier options using Geometric Brownian Motion and variance reduction.
- Implemented antithetic variates and control variates to improve estimator stability and compared results with Black-Scholes prices.
- Computed Greeks such as Delta and Vega using finite-difference methods and built a FastAPI + Next.js interface for visualization.

Freelance Developer | HimaVogue | Next.js, Node.js, MongoDB, Redis Aug 2025 - July 2026

- Built a full-stack e-commerce platform with product catalog, secure checkout, and admin workflows.
- Implemented JWT-based auth, role-based access, and middleware protection for customers, admins, and sellers.
- Developed order, inventory, and payment flows for a complete retail and marketplace experience.
- Added vendor onboarding, seller payouts, and commission management features.
- Optimized performance using Redis caching, media storage, and deployment-focused Next.js practices.
